SUMMARY

Results-oriented Computer Science and Engineering student with hands-on experience in system design, database architecture, and AI-driven automation concepts. Proven ability to lead academic and technical projects involving intelligent systems, management software, and workflow optimization. Strong analytical mindset with foundational expertise in Python, C++, and structured problem-solving. Seeking internship opportunities in AI, software development, or system engineering to apply technical knowledge in real-world applications

PROJECT EXPERIENCE

OS-Level Personal Desktop AI Assistant

Sep 2024 – Dec 2024

- Designed architecture for an autonomous desktop AI assistant
- Planned automation modules for email drafting, web search, PDF summarization, and task scheduling
- Focused on local processing and privacy-first AI system design
- Researched multi-agent system integration concepts

Feed Mill Management System

Jan 2025 – Apr 2025

- Designed and developed a centralized management system for feed production operations
- Implemented modules for raw material tracking, batch production management, and finished goods inventory
- Designed relational database schema for suppliers, production logs, inventory, and sales records
- Automated reporting system for stock monitoring and operational transparency
- Structured workflow to reduce manual record dependency and improve efficiency

National Crisis Response System

May 2024 – Aug 2024

- Contributed to logical and physical system architecture design
- Developed database structure and centralized monitoring workflow
- Designed system model for real-time emergency coordination
- Analyzed sustainability and operational scalability

MediSync – Healthcare System Design Project

Jan 2024 – Apr 2024

- Developed logical and physical database design
- Created workflow diagrams and user interaction models
- Conducted impact and sustainability analysis
- Documented system requirements and implementation planning

EDUCATION

Bachelor of Science in Computer Science & Engineering

Jun 2022 – Present

Bangladesh Army University of Engineering & Technology

Higher Secondary Certificate (Science)

Jun 2019 – Apr 2021

Bera Govt College, Bera, Pabna

TECHNICAL SKILLS

Programming Languages:

Python (Beginner–Intermediate), C++, JavaScript, SQL (Basic)

Web & App Development:

HTML, CSS, Firebase, React (Basic)

Database:

MySQL, Firebase Realtime Database

Core Knowledge:

Data Structures & Algorithms

Probability & Statistics

Markov Chains

Confusion Matrix & Model Evaluation

Database Design

Digital Image Processing Fundamentals

Tools & Platforms:

Git & GitHub

Firebase

Google Colab

Figma (UI/UX Wireframing)

Microsoft Excel & PowerPoint

VS Code, Android Studio

Soft Skills:

Analytical Thinking

Problem Solving

Technical Documentation

Team Collaboration

Project Planning
